Q

COMPOSITION

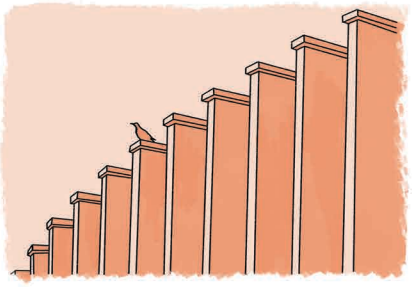
PATTERN, RHYTHM AND REPETITION

Pattern is a combination of elements repeated in a recurring and regular arrangement. **Rhythm** is a combination of elements repeated, but with variations. **Repetition** refers to one repeated object/shape.

Pattern

Use patterns to draw attention to details we would otherwise overlook.

Rhythm



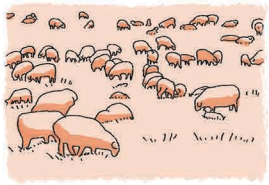
Break the pattern to focus on the element that stands out.

Types of Repetition

Artificial

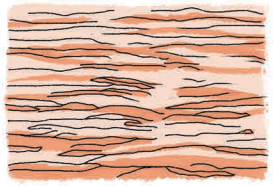
Many manmade designs use repetitions. Look at architecture, zebra crossings, or cobbled streets.

Subjects



Living subjects (like animals) can have similar shapes, colors, sizes, and features. But they are still slightly different. This makes them interesting to photograph.

Natural



Nature produces some very beautiful repetitions. Look at the placement of trees in a forest and rock formations. Try to find differences to break the pattern.

COMPOSITION

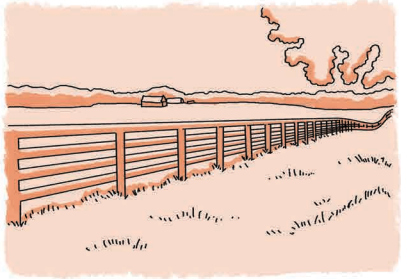
PERSPECTIVE AND DEPTH

Perspective is the viewpoint you take. It can affect the placement of elements within your scene.

Linear

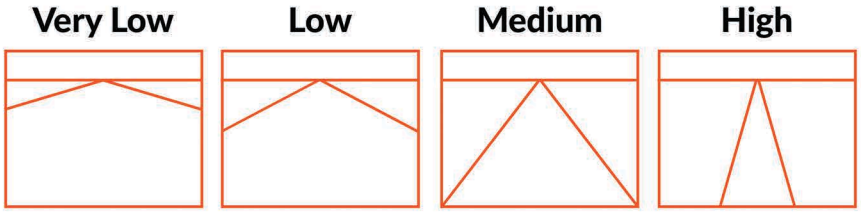
Look for converging lines to create a vanishing point.

Diminishing



Create infinite depth and highlight subjects to draw viewer attention.

Convergence and Height



Change Your Point of View
