LINES

Lines serve to create photographic composition in two ways. They add repetition, tension, or emotion to scenes. They lead the viewer's eye through the photograph, keeping their attention focused on the main subject.

Horizontal

Horizontal lines express stability. Balance comes from their association with the ever present horizon.

Distance and breadth are also strong here. Use when capturing a scene to separate subjects or contrasting areas.

Vertical

Vertical lines appear in objects that either give in to gravity or try to escape it. They represent strength.

They're best used for rock formations, buildings or forests. This is a great area to show repetition through numbers.

Diagonal

Diagonal lines add a sense of action, or add a dynamic mood to a scene.

Jagged and Irregular

These lines do not follow any rules, so they add a sense of tension.
