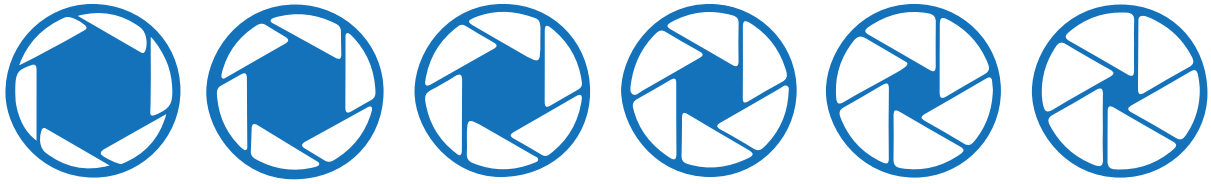
APERTURE

Aperture controls the amount of light that hits the film or sensor plane. Aperture blades can be opened or closed to increase or reduce the amount of light. F/2.8 will let in more light than F/22, for example. The aperture also directly affects your scene's depth of field.

f/2.8 **f/4** **f/5.6** **f/8** **f/11** **f/16**



EXPOSURE

MORE **LESS**

DEPTH OF FIELD

SHALLOW — **DEEP**

How To Use

f/1.4	f/2.8-f/5.6	f/8-f/16	f/16-f/32
• Bokeh • Low Light	• Portrait • Sports	• Landscape	• Long exposure
