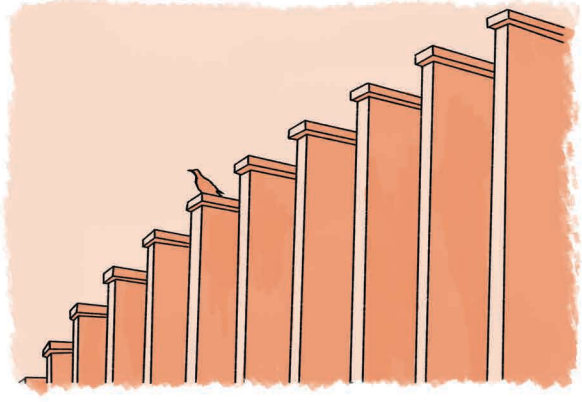
PATTERN, RHYTHM AND REPETITION

Pattern is a combination of elements repeated in a recurring and regular arrangement. **Rhythm** is a combination of elements repeated, but with variations. **Repetition** refers to one repeated object/shape.

Pattern

Use patterns to draw attention to details we would otherwise overlook.

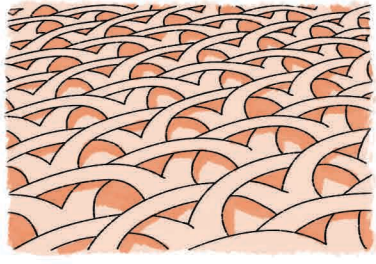
Rhythm



Break the pattern to focus on the element that stands out.

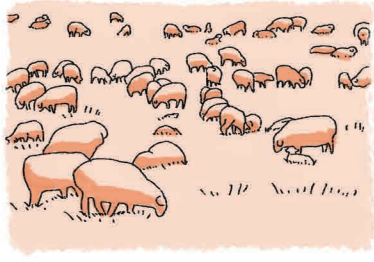
Types of Repetition

Artificial



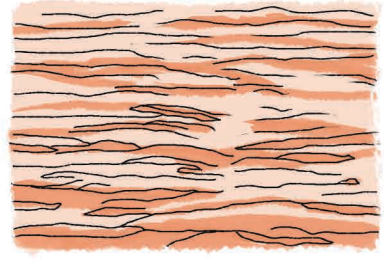
Many manmade designs use repetitions. Look at architecture, zebra crossings, or cobbled streets.

Subjects



Living subjects (like animals) can have similar shapes, colors, sizes, and features. But they are still slightly different. This makes them interesting to photograph.

Natural



Nature produces some very beautiful repetitions. Look at the placement of trees in a forest and rock formations. Try to find differences to break the pattern.
