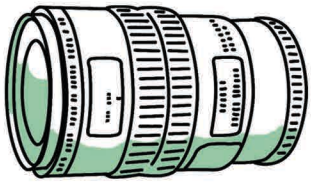
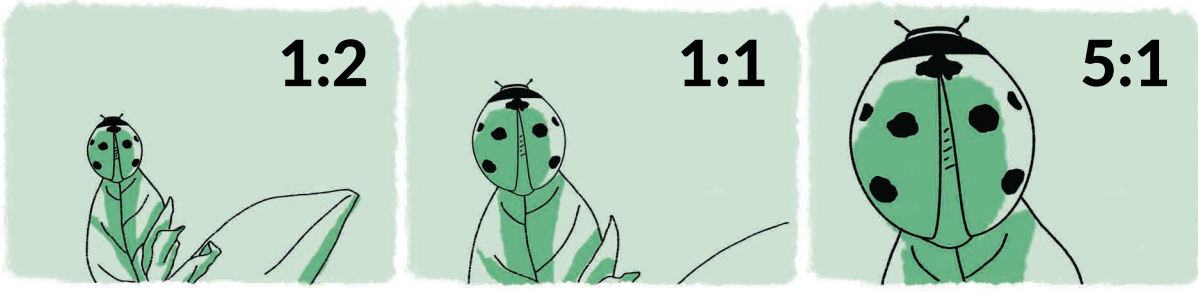
MACRO



Macro Lens

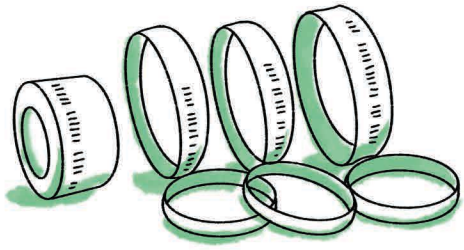
A macro lens allows you to focus with a very short focusing distance. The 1:1 magnification allows you to capture a scene's true size and scale.

Magnification Ratio



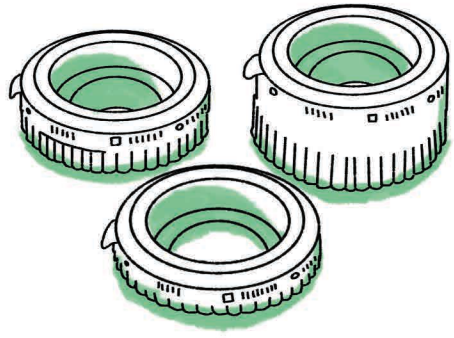
Gear

Close-up Lenses



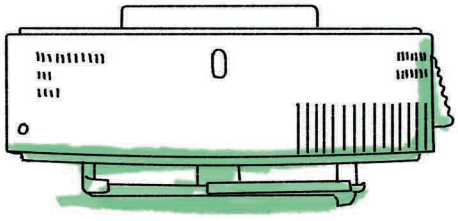
These simple secondary lenses bring the focus closer, allowing you to achieve sharp focus.

Extension Tubes



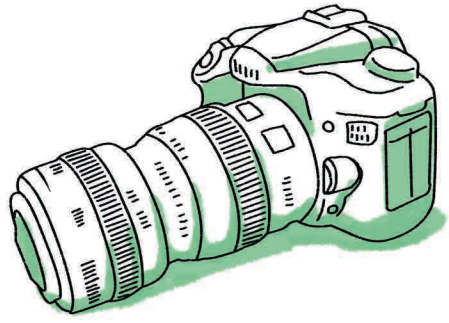
They create more magnification and focus closer by increasing the extension of the lens.

Teleconverter



These provide magnification directly through optics while maintaining working distance.

Reversed Lens Ring



They work by turning the lens around and magnifying the subject.
